ELECTROFAB EQUIPMENTS, specialists in electropolishing pharmaceutical stainless steel vessels, tanks, fluid bed dryers, pipes, pumps and valves, etc. Electro polishing is a process where material from the surface of the work piece is removed uniformly securing a bright and smooth finish. Treating with chemicals and applying appropriate electric current enhance the surface of the component. Electropolished surfaces are chemically passive, free from burs.

ELECTROPOLISHED vessels have a sanitary acceptable finish. Electropolishing is required for pharmaceutical, chemical, mechanical, nuclear, wood, paper and pulp industries.
